Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Ebe.

The claimed “lens-protecting barrier consisting of two barrier blades” is met by the main-barrier 2 and sub-barrier 3 of Ebe. The main-barrier and sub-barrier are “rotatably mounted around one shaft”, shaft part 4c. The main-barrier and sub-barrier “are superposed upon each other when saved from the lens aperture” as shown in figure 2.

Regarding claim 4, main-barrier 2 is “half moon shaped” and sub-barrier is “a wane portion.”

Regarding claims 2, 3 and 5, the main-barrier moves linearly from the lens covering position of figures 1 and 5 to the lens uncovering position of figures 2 and 6. Ebe teaches the “sliding motion may be changed to a rotating motion” column 5, lines 8-9. Adapting the main-barrier to rotate would necessitate adapting the guide means to guide the barriers while rotating.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Gotanda is cited for its disclosure in figure 6, which shows a lens cover that appears to have a common rotation axis for both barrier members.

Art Unit: 2851

Akiba et al. is cited for its disclosure of a lens cove that rotates from a covering position to an uncovering position.
